## SKILLS

### Backend

Java • Gradle  
Hibernate • Spring Boot

### Data and migration

SQL Server • PostgreSQL  
SSIS • SSMS • Databricks  
Data migration • Guidewire

### Delivery and hosting

Jenkins • Git • SonarQube  
Cloudflare • Render • Vercel

### Testing and tooling

SQL-based data testing  
Swagger • MonkeyUI • Charlie

### Web applications

OpenAI API • Supabase

### Team and collaboration

Technical Lead • Team Lead  
Architecture • Code quality

## EDUCATION

Industrial Engineering  
and Management  
DTU | 2019 - 2021

Mechanical Engineering  
DTU | 2015 - 2019

# Tobias Wiik Thalbitzer

Software Consultant at Wivosoft

## PROFILE

I'm a self-reliant software engineer with almost five years of experience in backend development, data migration and testing. My engineering background and delivery responsibilities have taught me to think through the whole process from analysis to production while keeping business needs in view.

At Netcompany, I worked on complex insurance projects and was promoted twice, taking on responsibilities as both Technical Lead and Team Lead. I'm comfortable doing hands-on development as well as planning and coordinating the work across teams.

I use AI to discuss solutions, review pull requests and support development, while reviewing the results myself. I also build web applications outside work, including Job Watcher.

## EXPERIENCE

### Co-founder and Software Consultant

Wivosoft | Oct 2026 - Present | Copenhagen

Establishing a software consultancy focused on freelance development and technical delivery, drawing on experience from Netcompany.

### Senior IT Consultant

Netcompany | Jan 2024 - Aug 2026 | Copenhagen

- Served as Technical Lead and Team Lead for If Insurance's Agriculture Migration Finalization. Designed and implemented the migration architecture for customers representing DKK 1 billion in revenue, moving them to Guidewire.
- Developed Guidewire features and tooling to support collaboration across large development teams.
- Managed two complex test environments, each running more than ten interconnected applications.
- Co-led a code quality initiative focused on maintainability and stronger development practices.

### IT Consultant

Netcompany | Dec 2022 - Dec 2023 | Copenhagen

- Developed and maintained a Java application for automated data migration in Topdanmark's agriculture insurance business.
- Investigated large datasets in SQL Server and resolved business issues and defects across the project.
- Led two successful migrations.

### Test Consultant

Netcompany | Dec 2021 - Dec 2022 | Copenhagen

- Developed a data migration test strategy and an automated data-testing framework for Topdanmark's agriculture migration.
- Used SQL to explore and investigate large datasets as part of migration testing.

## PERSONAL PROJECTS

### Job Watcher [jobwatcherai.com](http://jobwatcherai.com)

Built a full-stack web application with Supabase authentication. Integrated the OpenAI API for web search and structured outputs.
